

# JOHAN DANIEL OSPITIA YAGUARA

Cali, Colombia | +57 322 3595445 | jjohanospitia@gmail.com | LinkedIn | GitHub | Portfolio

## PROFESSIONAL SUMMARY

Fullstack Developer | Node.js · React · Spring Boot with 4+ years building REST APIs, microservices, and scalable web applications on cloud and containerized environments. Specialist in service integration, SQL databases, and deployment automation with Docker and Linux, incorporating generative AI solutions to accelerate product delivery. Seeking to contribute secure, maintainable, high-impact architectures within agile, results-driven teams.

## EDUCATION

|                                                                                                                    |                   |
|--------------------------------------------------------------------------------------------------------------------|-------------------|
| <b>Universidad Internacional de La Rioja (UNIR)</b><br><i>Master's Degree in IT Management and Governance</i>      | 2026-08 - Present |
| <b>Corporación Universitaria Autónoma de Nariño</b><br><i>Professional Degree in Computer Engineering (Honors)</i> | 2018-01 - 2023-11 |
| <b>Centro Cultural Colombo Americano</b><br><i>Languages - English (B2 Level in progress, B1 OOPT Certified)</i>   | 2024-01 - 2026-04 |

## SKILLS

**Programming Languages:** JavaScript, TypeScript, Node.js, Java, PHP, Python, SQL  
**Frameworks & Libraries:** Spring Boot, React, Angular, Laravel, FastAPI, PrimeNG, Tailwind, Bootstrap 5, Ant Design  
**Databases & Cloud:** PostgreSQL, MySQL, Oracle, MinIO, AWS S3, AWS Lambda, Docker, Cloudflare  
**DevOps & Tools:** Linux, Git, GitHub Copilot, Scrum, Test Automation, Playwright, CI/CD, Power BI, Big Data  
**AI & LLMs:** Claude, Gemini, DeepSeek, GPT, AI Agent Orchestration, OpenCode, Prompt Engineering  
**Security & Integrations:** Server-side Authorization, Multitenant, Secrets Management, Least Privilege, HTTP Integrations, REST APIs, SSE (Server-Sent Events), Swagger/OpenAPI, Postman  
**Mobile Development:** Android/Java  
**Complementary Training (In Progress):** AZ-900: Microsoft Azure Fundamentals (in progress), AWS Cloud Practitioner (in progress)

## WORK EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                   |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| <b>ICT Engineer - QA</b>   <i>Blue Data Service</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 2024-02 - 2026-09 |
| <ul style="list-style-type: none"><li>Reduced production bugs by 30% by reporting technical failures and collaborating closely with developers and the consulting team on root-cause fixes.</li><li>Achieved 90% test coverage across critical system modules by leading test automation and agile practice adoption within the QA team.</li><li>Verified medical workflows (admissions, outpatient care, hospitalization, pharmacy, and billing) to ensure software compliance with healthcare sector regulations.</li></ul> |                   |
| <b>ICT Analyst &amp; Developer</b>   <i>Proyectos De Ingeniería Proing S.A.</i>                                                                                                                                                                                                                                                                                                                                                                                                                                               | 2022-02 - 2023-11 |
| <ul style="list-style-type: none"><li>Cut deployment times by 25% by configuring microservices architecture and connecting it with existing infrastructure to improve scalability.</li><li>Developed backend applications in PHP and Java, plus native Android mobile apps for internal company use.</li><li>Defined technical requirements from scratch alongside other departments to align project planning with business needs.</li></ul>                                                                                 |                   |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                            |         |

| <b>Resume Tailor AI v2.5</b>   <a href="https://github.com/JOspitia/jd-to-resume-v2">https://github.com/JOspitia/jd-to-resume-v2</a>                                                                                                                                                                                                                                       | 2026-09 |
| <ul style="list-style-type: none"><li>Architected a CV optimization platform based on LLM orchestration and Typst rendering, generating vector PDFs in under 5 seconds via a Server-Sent Events (SSE) flow.</li><li>Built the backend in Python (FastAPI) for orchestration and compilation with Typst, while the UI was programmed in TypeScript with React 19.</li></ul> |         |

### **Serverless Notes & Metrics Dashboard** | <https://github.com/JOspitia/fixlat-tablero-notas>

2026-09

- To solve the lack of real-time task visibility, designed a drag-and-drop task management app under a serverless architecture to process metrics in the background without overloading the main server.
- Implemented asynchronous functions in AWS Lambda, connecting a PHP (Laravel) backend with an interactive web client in React and JavaScript.

### **Inventory Management & IoT Monitoring** | <https://github.com/JOspitia/prueba-tecnica-johan-ospitia>

2026-07

- Through a REST API and data logic built with PHP (Laravel) and TSQL, enabled batch traceability and warehouse control that receives and processes real-time readings from IoT sensors.
- Integrated the control panel in TypeScript (React 19) with Ant Design components.

### **HR-Tech SaaS Platform (AppMiAplicacion)** | <https://github.com/JOspitia/AppMiAplicacion>

2025-11 - 2026-01

- Reduced data privacy risk by implementing logical data isolation per company at the database level in a multi-tenant SaaS platform for HR management.
- Developed core services in Java with Spring Boot and PostgreSQL (PLpgSQL), integrating a TypeScript (Angular) frontend and file storage with MinIO on Docker.

## **ACHIEVEMENTS**

---

- Diploma in Big Data and Business Intelligence - Predictive analytics with Python and Power BI.
- Agile Project Management Course: Design Thinking and Scrum - UNIR.
